

Individual Reeves Hospital Response

6.8' W x 5' L x 8.3' H
RDPK0001 (Blue)

The Individual Reeves Hospital Response Decontamination System is a rapidly deployable NBC decontamination facility crafted to effectively decontaminate ambulatory or non-ambulatory patients at the site of a hospital or emergency facility that includes a ready supply of hot water.

Perfect for deploying in any setting with only 1-2 personnel and built to withstand winds, temperature and the elements, the Reeves Individual Decontamination System is deployable in less than six (6) minutes for maximum response. It can be used to decontaminate one (1) to two (2) ambulatory patients, or one (1) non-ambulatory patient at a time.

Reeves Decontamination Systems

Reeves Hospital Response Decontamination Systems provide first receivers with fully equipped NBC decontamination facilities in the event of an emergency incident.

The systems are built to be deployed next to a hospital or emergency facility that includes a ready supply of hot water, and come with a full line of decon equipment, including an integrated plumbing package, berm, elevation grids, water pump, roller system and water supply adaptor kit. Multiple showerheads and spray wands supply the water flow necessary for thorough decontamination. Reeves Decontamination System are also available with undress and redress areas.

Individual Reeves Hospital Response

System Features

- Rapidly deployable system in a lightweight and compact footprint
- No center poles or locking devices are needed to keep the shelter erect
- Shelter frame is manufactured from Titanite, an aerospace material with a flex strength 270% greater than that of aluminum
- Shelter will remain functional with up to 60% of the frame damaged or broken
- Durable, pre-attached cover is fire-retardant, mildew-resistant, water-repellent and highly abrasion- and UV-resistant
- Enough inside height to comfortably gross decontaminate individual personnel outfitted in any level of protection
- Effective for NBC decontamination of one or two ambulatory patients at a time
- Easily converted to a non-ambulatory decontamination system with the removal of center modesty curtain
